Coating

PYRO-SAFE

Intumescent Fireproofing Wraps for Cables

Product Overview

PYRO-SAFE Cable Wraps are an FM approved intumescent coated cable wrap systems manufactured in Germany by SVT to protect cables from fire spread across their surface should a fire start on or adjacent to the cables. It also offers protection in the case of auto ignition of electric cables through short circuits or overheating.

PYRO-SAFE cable wraps are an extensively tested solution and have many fire test approvals worldwide.

Consisting of a ready to use glass fabric, which has been treated with a specialised intumescent coating, PYRO-SAFE Cable Wraps are quick and simple to install over complex cable configurations. Cable Wraps can be removed and easily reinstated to allow the addition or removal of cables.

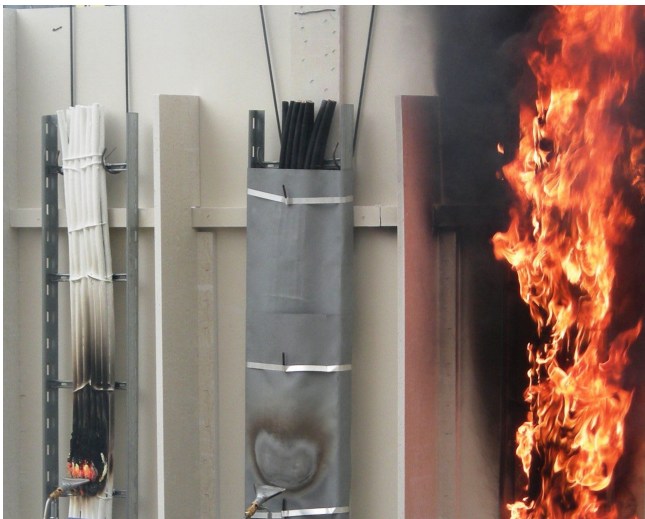

One of the biggest advantages is the cables do not require cleaning prior to the application of the wrap system and allows for adds, moves and changes.

To maintain market leadership, Trafalgar stay up to date with the latest technologies and trends in passive fire protection and contemporary construction techniques. **We are 70 years strong and still innovating!**

PYRO-SAFE

Intumescent Fireproofing Wraps for Cables

Product Overview

APPLICATION:

PYRO-SAFE Cable Wraps are used to protect cables from fire spread in industrial, marine and offshore applications where the most stringent approvals are required. They can be installed in four general configurations.

- Wrapping of the cable trays and enclosed cables.
- Wrapping of the cables on the tray.
- Wrapping of individual cables and cable bundles.
- Three-sided wrapping for cables or cable bundles on walls or slabs.

SPECIFICATION:

Apply PYRO-SAFE Cable Wraps supplied by Trafalgar to all runs of cable as per Trafalgar's detailed installation instructions using approved and specialist applicator nominated by Trafalgar.
