

TRAFALGAR COREX SHAFT WALL

Trafalgar Corex is a lightweight, impact resistant, high performance fire rated board. Such properties make it ideal for the construction of solid partitions for use as fire rated shaft walls and vertical bulkheads to enclose services.

KEY FEATURES

- Lightweight boards
- Thin partition footprint
- Install from one side
- Impact resistant
- FRL up to 2 hours
- Compliance with AS1530.4-2014 and AS4072.1
- Easy to cut and handle
- Low thermal conductivity
- Non-combustible
- Environmentally friendly/sustainable

APPLICATIONS

- Solid partition walls for 60, 90 and
 120 minute FRL's for:
 - Riser Shaft walls
 - ♦ Steel protection
 - ♦ Vertical bulkheads up 4m high

TRAFALGAR COREX

WHAT IS A SHAFT WALL AND TRAFALGAR COREX?

Shaft walls are critical in any multi-level building in order to pass services vertically to satisfy various systems on differing levels. It is often ideal for these types of wall to be constructed from the outside of the shaft only. This has led to the development of some unique shaft wall constructions with this manual focusing on the use of Trafalgar Corex board for shaft walls.

Trafalgar Corex is a lightweight, high performance fire rated board. It has a glass-reinforced gypsumbased material, which is environmentally friendly and meets all requirements for asbestos and volatile organic compounds (VOC's) with sustainability certification.

Trafalgar Corex boards are able to withstand high temperatures while remaining stable and crack free, providing an ideal product for fire protection. Particularly suited to constructing vertical fire rated bulkheads, Trafalgar Corex is approved to the current AS1530.4 – 2014 and AS4072.1 as a fire rated solid partition wall.

Whilst this manual will focus on shaft walls constructed with Trafalgar Corex, it can also be used in steel protection systems and vertical bulkheads (link to manuals) in accordance with AS4100.

APPLICATIONS: EXPANDED

Trafalgar Corex boards are suitable for constructing shaft walls using 64mm studs and fixings to secure to fire rated walls such as concrete, masonry or plasterboard.

FRL DETAILS

FIRE RATING – HOW IS FIRE PERFORMANCE MEASURED?

An FRL (fire resistance level) is a handy way of summarising the performance of a building element. It consists of 3 numbers, all given in minutes:

Note: Penetrations are not required to have a Structural Adequacy rating and is usually expressed as a dash. For example, a penetration through a 2 hour load bearing wall would be written as -/120/120.

STRUCTURAL ADEQUACY

These walls are non-load bearing and therefore does not have a structural adequacy rating.

INTEGRITY

The Trafalgar Corex board can achieve the integrity performance for up to 2 hours when used as a vertical shaft wall or bulkhead and can stop the direct spread of fire in (or out) of the enclosure.

INSULATION (TEMPERATURE RISE)

Heat transfer (or heat rise) through a Trafalgar Corex shaft wall will occur at different times depending on the thickness of the board used. Refer to the FRL tables below for more information on the FRL's that can be achieved depending on the thickness of the shaft wall.

FRL TABLES

TRAFALGAR COREX SHAFT WALL

Trafalgar Corex Shaft Wall on one Side of Framework

Trafalgar Corex has solid partition wall approvals when constructed with 2 layers of board for heights up to 4m. The proceeding table identifies the potential FRLs that can be achieved.

Board Thickness	Stud	Overall Wall Thickmness	FRL (2-way FRL)	Max Span	Approved Bulkead-Fire Barrier Interfaces
2 x 15 mm	64 mm	94mm	-/60/60		
2 x 20 mm	64 mm	104mm	-/90/90	Heights up to 4m	Plasterboard wallsPlasterboard CH shaft walls75mm AAC panel wallsConcrete/masonry walls
2 x 25 mm	64 mm	114 mm	-/120/120		

FRL TABLES - 90 MINUTE WALLS

Trafalgar Corex Shaft Wall on one Side of Framework

Trafalgar Corex has solid partition wall approvals when constructed with 2 layers of board for heights up to 4m. The proceeding table identifies the potential FRLs that can be achieved when Trafalgar Corex is constructed as a shaft wall containing certain service penetrations.

FRL TABLES - FYREBOX

Trafalgar Corex Shaft Wall on one Side of Framework

2x laminated Corex boards fixed to one side of a 64mm steel stud. FRL of the wall is related to thickness of the Corex facings as shown in the table. FyreBox Maxi, Mini, Slab Mounts and SuperStopper Circulars all have the following approvals

Openings for FyreBox Maxis or Slab Mounts must be framed out with the same thickness COREX as the wall. See installation detail on page 22. Full instructions can be found in the respective FyreBox technical manuals.

Comice Tune	ç.	wice Specification	Corex I & FyreB	TWrap Length		
Service Type	Se Se	rvice Specification	2x15mm	2x20mm	2x25mm	required (mm)*
		Up to 32mm				450
	PEX Pipes	Up to 32mm with 19mm E-Flex insulation				450
Plastic Pipes		Up to 32mm				450
·	PEX-Al-PEX pipes	Up to 32mm with 19mm E-Flex insulation				450

		Up to 9.5 & 19mm with 20mm FR insulation				450
	TPS	Up to 12x 2.5mm² per bundle				450
Power Cables - Copper Core	AS1530.4 Appendix D1 cable set	Applies to copper core power cables and cable trays up to 1000mm wide				600**
Power Cables Aluminium Core	Single Core cables	Bundles of up to 3 x 240mm², 4 x 120mm² and 9 x 70mm² per bundle (16x cables total)				450
	RG6 coax	Up to 3x per bundle				450
Communications Cables	AS1530.4 Appendix D2 cable set	Applies to copper core comms cables, including cable trays up to 1000mm wide				450
Conduits	Rigid or Flexible PVC Conduits	Up to 32mm OD (with or without cables)				450

^{*}For specific service based FRL's without using TWrap, refer to report FC10266. Without TWrap, the wall must be thickened on one side with 100mm wide Maxilite, 60mm thick around the penetration.

^{**}Only 450mm of TWrap required for -/60/60 and -/90/90 applications

FIRE RATED ACCESS PANELS

Installation details are on page 16 and 17

It is common on construction sites to come across service shaft penetrations that only have one sided access. This can be an issue as most fire stopping systems are required to be symmetrical and as such need access to both sides for installation. Further to this, access to both sides is often required for inspection and maintenance throughout the life of the building.

A simple solution to this is to install an Access Panel. The main consideration is that much like service penetrating in the wall, the access panel must also be fire rated to maintain the FRL of the barrier.

The NCC requirements for an Access Panel in a service shaft, is-/xx/30. For example, an Access Panel installed into a 90min plasterboard shaft wall must achieve -/90/30. Trafalgar have a range of Access Panels designed to achieve this, none more prominent than the FyreSHIELD™.

FyreSHIELD™ is a proudly Australian made Access Panel system which has been designed and tested to be built into partition walls and riser shafts. With improved fire and acoustic performance while maintaining the signature Trafalgar Australian-made quality, the FyreSHIELD™ is the only Access Panel worth specifying and installing!

For more information on the FyreSHIELD™ range or any other Access Panels, go to taccess.com.au, or call 1800 888 714. In some instances, non-fire rated Access Panels will be required, for example a wall penetration within a non fire-rated ceiling space. In this instance, a non fire rated access panel could be installed in the ceiling to gain access to the service penetration for maintenance and inspection purposes. For our range of non fire-rated access panels head to taccess.com.au. The range includes metal, wood, acoustic, and more Access Panels for every application.

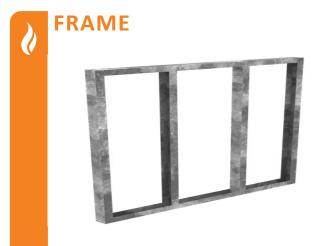

INSTALLATION

TRAFALGAR COREX SHAFT WALL

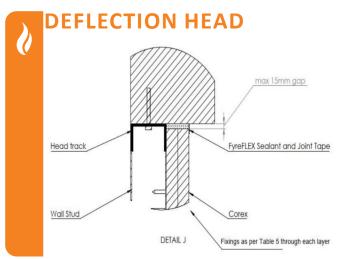

Frame the wall using 64mm steel studs at the perimeter and at 400mm centres. Use 6×45 mm screws at 500mm centres. Fix framing to the surrounding walls and floors with appropriate fixings for the barrier.

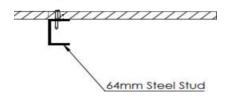

Score the Trafalgar Corex board to the required size with a Stanley knife and snap similarly to plasterboard

For assistance contact Trafalgar Fire's technical team at technical@tgroup.com.au

Allow max. 15mm gap where Corex meets the slab and infill with FyreFLEX sealant and apply joint tape.

FIRST TRAFALGAR COREX LAYER

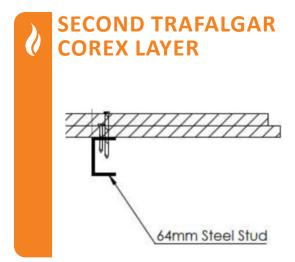

Apply the first layer of Trafalgar Corex board and fix using Min 8g x 45mm plasterboard screws at 400mm centres.

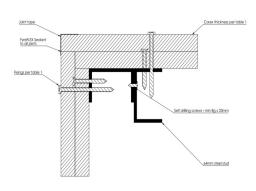

INSTALLATION

TRAFALGAR COREX SHAFT WALL

Apply the second layer of Trafalgar Corex board. Fix using Min 8g x 75mm plasterboard screws at 300mm centres.

Apply FyreFLEX sealant to all joints and use joint tape to complete the corners and board joints. Install stud as depicted for corner joints.

For assistance contact Trafalgar Fire's technical team at technical@tgroup.com.au

FAQ

Q Can I use Trafalgar Corex board to construct a horizontal bulkhead?

A No, for horizontal bulkheads refer to the Maxilite horizontal bulkhead tech guide.

Q I have tight space requirements, can I use 1 layer of Trafalgar Corex board for vertical bulkheads?

A Trafalgar Corex has approvals for vertical bulkheads constructed with 2-layers of board only.

Q Do the fixings require FyreFLEX sealant where the Trafalgar Corex board is penetrated?

A FyreFLEX sealant is not required for the fixings.

Q Are there any two hour rated penetration systems?

A Yes! See page 8 and 9

Q Can I install a damper into a Corex partition wall?

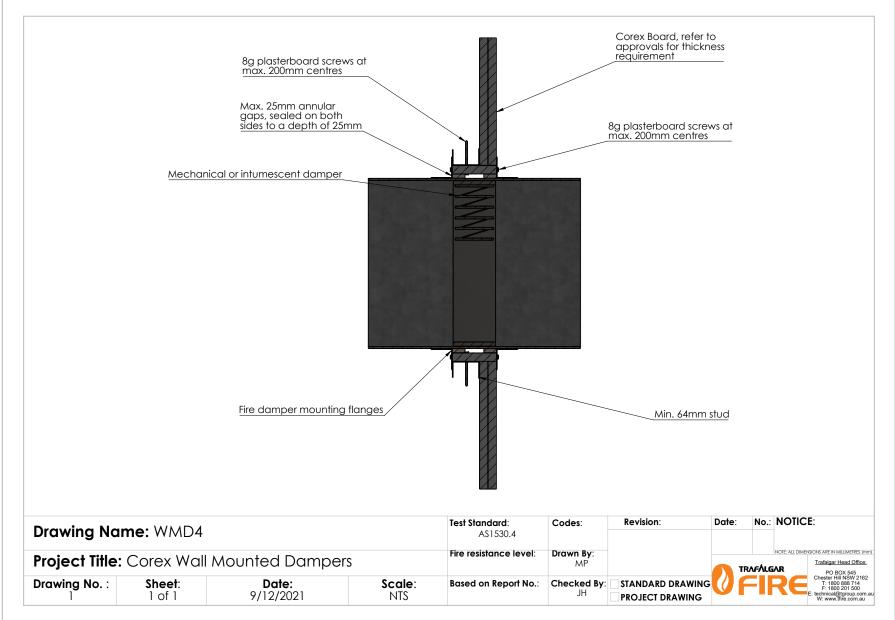

A Yes, it is possible with the use of 1-3 layers of minimum 30mm Maxilite. Please refer to the drawing on the next page.

Q Can I paint over Trafalgar Corex board?

A Yes, it can be painted like any plasterboard wall.
